

JVD Internal Management System

Business Logic Requirements

Source: Boss Takedown Notes & Stakeholder Insights

Last Updated: May 12, 2026 | Status: Living Document — Update as clarifications are received

1. Internal Jargon & Terminology

Term	Definition
Joiners	Individual, couple, or group passengers sharing the same fleet/travel package. A single booking can contain multiple joiners from different parties (e.g., a Baguio trip may combine an individual, a couple, and a family group under one bus/package).
Fleet	Company-owned vehicles managed under the PMS module.
PMS	Preventive Maintenance System — also serves as the full vehicle profiling system.
JO	Job Order — internal work request for vehicle maintenance.
WO	Work Order — auto-generated from PMS schedules; requires approval before execution.
PO	Purchase Order — issued only when parts or products must be sourced from external suppliers.
KYC	Know Your Customer — compliance documents uploaded during accreditation.

2. Customer Details

Each customer record must capture the following minimum fields:

- Full Name
- Address
- Contact Number
- Email Address

Note: Customers may book as individuals, couples, or groups. The system must support a **Joiners** model where multiple customer records are linked to a single booking/package.

3. Travel Module — Joiners Logic

- A single travel booking (fleet/package) can accommodate **multiple joiners** of different types (individual, couple, group).
- Example: A Baguio trip may have Joiner A (individual), Joiner B (couple), and Joiner C (family group) — all under the same bus/departure.
- The system must track each joiner's details separately but link them to the parent booking.
- **Passenger manifests** should reflect all joiners per fleet/trip.

4. Procurement Workflow

4.1 Purchase Order (PO)

- **Responsible:** Sir Jaymart
- A PO is issued **only** for parts or products that must be **sourced from external suppliers**.
- PO must include: Item/Part Number, Quantity, Supplier details (cross-referenced and counter-checked).
- **Monthly payment tracking and consignment records** must be maintained.
- Each receipt must capture the **part number and all details** necessary to counter-check all purchased parts (critical for vehicle maintenance audit trails).
- **Supplier verification:** All supplier information must be cross-checked and counter-checked before PO issuance.

4.2 Check Records

- PO records must be maintained for auditing purposes.
- System should support filtering/searching POs by supplier, part number, date range, and status.

5. Work Orders & Job Orders

5.1 Job Order (JO)

- **Authorized to issue:** Ma'am Minda
- A Job Order can be created for vehicle maintenance tasks.
- If **no PO is required** (parts already in-house), the JO proceeds directly to execution without waiting for procurement.
- If **parts must be sourced externally**, a linked PO is generated and must be fulfilled before the JO can proceed.

5.2 Work Order (WO)

- **Focus:** PMS (Preventive Maintenance System)
- Work Orders are **auto-generated** by the system based on PMS schedules (mileage thresholds, date intervals).
- **Critical Rule:** Auto-generated WOs must be **approved by the designated employee** before any maintenance work proceeds. No work should begin on an unapproved WO.
- Mechanics can also **request** a Job Order for vehicle maintenance through the system.

Critical Rule: Auto-generated WOs **MUST** be approved before any maintenance work begins. This is a non-negotiable business rule enforced at the system level.

Workflow Summary

PMS Schedule Triggered

|

v

Auto-Generate Work Order (WO)

|

v

Designated Employee Reviews & Approves WO

|

[No external parts needed?]

Yes -> Proceed with JO directly
No -> Issue PO to Supplier -> Receive Parts -> Proceed with JO
v
Work Completed -> Record in PMS Vehicle Profile

6. Preventive Maintenance System (PMS)

6.1 Vehicle Profiling (Critical)

Each vehicle must have its own individual profile. The PMS also serves as the complete vehicle profiling system.

Per-unit profile must include:

- Vehicle details (plate number, make, model, year)
- Designated driver(s)
- All vehicle documents (registration, insurance, permits, etc.)
- Full maintenance history
- Mileage records
- Upcoming scheduled maintenance

6.2 System Overview

- **Individual unit view** — deep profile per vehicle
- **Fleet overview** — summary of all vehicles' status, due maintenance, alerts

6.3 Company Consumption Tracking (CRITICAL)

Boss Emphasis: THIS IS CRITICAL FOR BUSINESS WORKFLOW AND RECORDS COMPILATION.

The system must track **all company consumables and parts consumption** per vehicle. This data is used to:

- **Audit** all company consumption comprehensively
- **Predict** future maintenance needs
- Support financial reporting for operational costs

6.4 PMS Schedule

- PMS schedule documents are maintained in the office.
- The system should mirror/digitize these schedules and send alerts when maintenance is due.

7. Accreditations Module

Accreditations cover **three entity types**:

- **Suppliers** — external vendors providing goods/services
- **Partners** — affiliated companies or collaborators
- **Clients** — customers or organizations being serviced

7.1 Required Information Per Accreditation

- Company permits and government documents
- Rates / pricing agreements

- Identification documents
- Contact person details

7.2 Legal & Compliance Documents

- **Non-Disclosure Agreement (NDA)** — required per accreditation
- **Terms and Agreement** — required per accreditation
- Must adhere to **professional and legal standards**

7.3 KYC (Know Your Customer) Process

- Each accredited entity must submit KYC documents.
- System generates a **Gmail-accessible submission link/form** for the supplier/partner/client to upload their KYC documents.
- Documents are stored within the accreditation profile.
- System must support **document upload functionality** for KYC files.

8. Automated Service Adviser

The system must include an **Automated Service Adviser** feature. This adviser should:

- Notify relevant staff when a vehicle is due for maintenance (based on PMS schedule).
- Recommend service actions based on mileage, age of last service, and consumption data.
- Generate alerts for expiring vehicle documents, accreditation renewals, or KYC expirations.

Exact implementation scope (AI-based vs. rule-based threshold alerts) to be defined in Sprint planning.

9. Key Business Rules Summary

Rule	Detail
Auto-generated WOs require approval	No maintenance starts without designated employee sign-off
PO only for external sourcing	Internal stock fulfillment bypasses PO entirely
Joiners can be mixed types per booking	One trip can have individual + couple + group joiners
Each vehicle has its own PMS profile	No shared profiles; designated drivers recorded per unit
All consumption must be recorded	Critical for audit and cost prediction
KYC required for all accredited entities	Submitted via Gmail-accessible form
NDA + Terms required per accreditation	Legal compliance is mandatory

10. Open Items / For Clarification

The following items are pending stakeholder clarification and will be resolved in upcoming sprint planning sessions.

#	Open Item	Status
1	Exact fields required on the KYC submission form	Pending
2	Who approves accreditations (designated employee/role)?	Pending
3	Automated Service Adviser — AI-based recommendations vs. rule-based threshold alerts?	Pending
4	Joiner pricing logic — does each joiner type have a different rate within the same package?	Pending
5	Monthly consignment payment schedule — tracked per supplier or per PO?	Pending
