

JVD Internal Management System

Documentation Set — Index & Reading Order · v1.0 FINAL · 2026-07-04

JVD Professionalization — Documentation Set (v1.0, FINAL)

Produced 2026-07-04. Six documents. Read in this order:

#	Document	What it answers	Read when
1	IMPLEMENTATION_ROADMAP.md	The master execution checklist — all phases, all items, dependency order, learning track, top-5 priorities	First, and weekly during execution
2	SYSTEM_AUDIT_AND_REFACTOR_PLAN.md	What the system has, what works (verified by live test run), what's missing, which professional standards apply (and why not Kubernetes)	Before committing to the plan
3	ARCHITECTURE_AND_DATA_REVIEW.md	Does the database & architecture hold up? (Verdict: B-minus, four structural flaws, no rebuild needed; target = modular monolith)	Before Phase 2
4	PRODUCT_IMPROVEMENT_SPEC.md	Brand colors & UI uniformity · notifications · email digests · document repository · workflow engine · flexible roles · dashboards-as-widgets · sales service catalog · the six data-integrity rules (§9 — read twice)	Before Phase 2 & 3
5	DESIGN_DIRECTION.md	Figma-derived design tokens, the 14-component library, modal/drawer/page decision rules, screen migration order	Before Phase 3
6	OPERATIONS_TRAINING_AND_ROLLOUT.md	PH deployment choices & costs · caching · maintenance/IT support · DPA/BIR compliance flags · handoff kit · employee training & in-app tutorials	Before Phase 1 (deployment) and Phase 4.5 (rollout)
7	TEAM_WORKFLOW.md	Developer assignments per roadmap item (Val · Emman · Greg · Jerald) · branch strategy & one-time migration · worktrees · review rules · weekly rhythm	Everyone, before Phase 0

Quick-start summary: the system is functionally rich and worth keeping (125 passing tests of 126; sound schema fundamentals). The transition to professional quality is: Phase 0 fixes + hygiene → Phase 1 CI/CD, Docker, staging, monitoring, backups → Phase 2 backend correctness (transactions, ledger, workflow engine, abilities, notifications, DMS) → Phase 3 frontend rebuild on the design system → Phase 4 test depth + load proof → Phase 4.5 rollout & training → Phase 5 scale. ~14–16 focused weeks, shippable in slices, business never stops running.

Older root-level reports ([QA-IMPROVEMENTS.md](#) , [QA-REMEDIATION-SUMMARY.md](#) , [FULL_SESSION_REPORT.txt](#) , etc.) are **superseded** by this set — their security findings were re-verified fixed in [SYSTEM_AUDIT_AND_REFACTOR_PLAN.md](#) §3.3.
